SUMMARY STATEMENT

I am a highly motivated Software Developer with over three years of experience in web and backend development. I have developed applications for numerous purposes and industries such as warehousing, logistics, banking, general business operations, and much more. I hold experience with API integrations ranging from Walmart Marketplace to Reverse Geocoding to Payment Processing. I enjoy learning new skills and tools that allow the world of computer science to operate more efficiently and reach greater heights with each new iteration. I am early in my career and exploit a hunger for knowledge and the pursuit of challenges in order to better myself. My career is based upon continuous hard work, the desire to help those around me, and the development of the best possible product.
